

Does the structural model recover allele-specific motifs?
Whole-data empirical motifs are descriptive; no fitting to these motifs

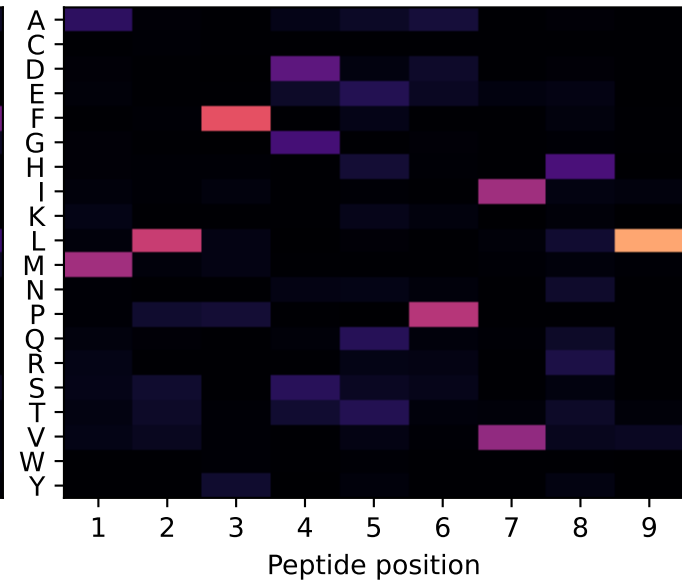

HLA-A*02:01
Empirical: half-life >2 h

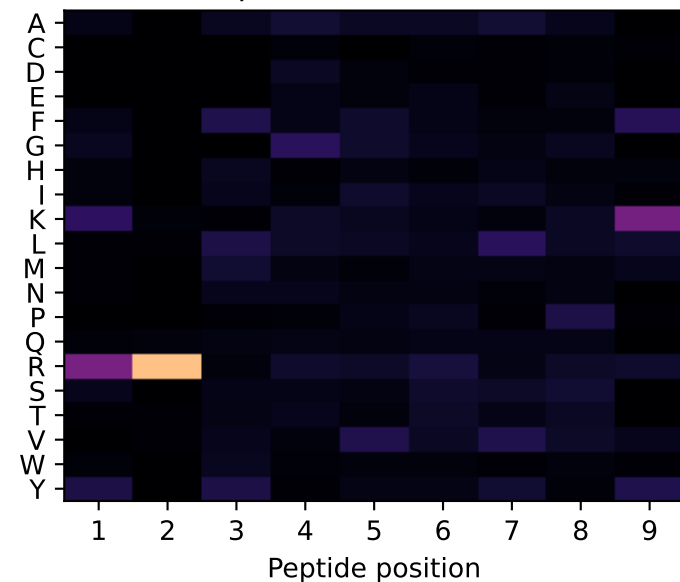

HLA-A*02:01
Shared ensemble

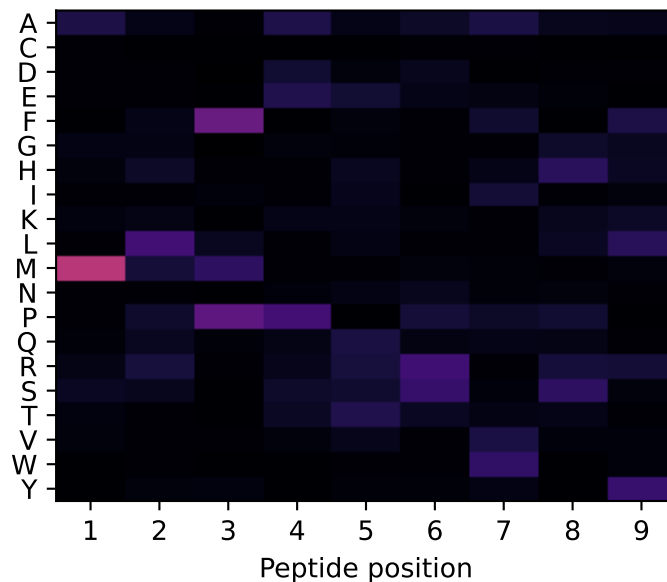

HLA-A*02:01
Matching allele template

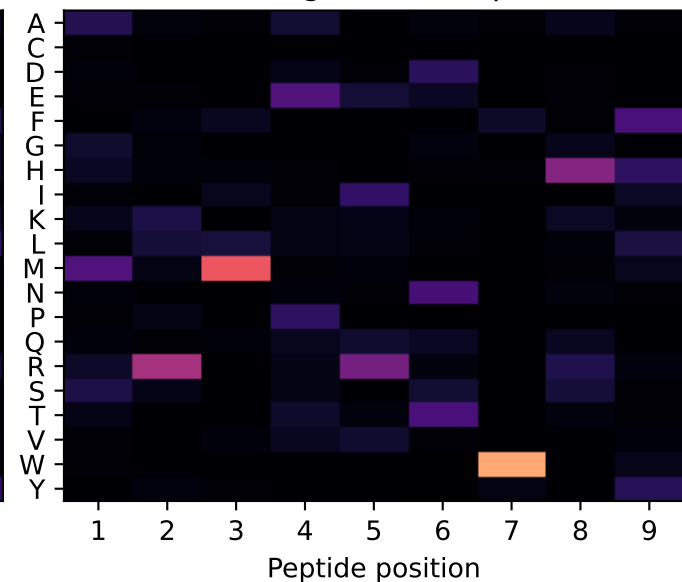

HLA-B*27:05
Empirical: half-life >2 h

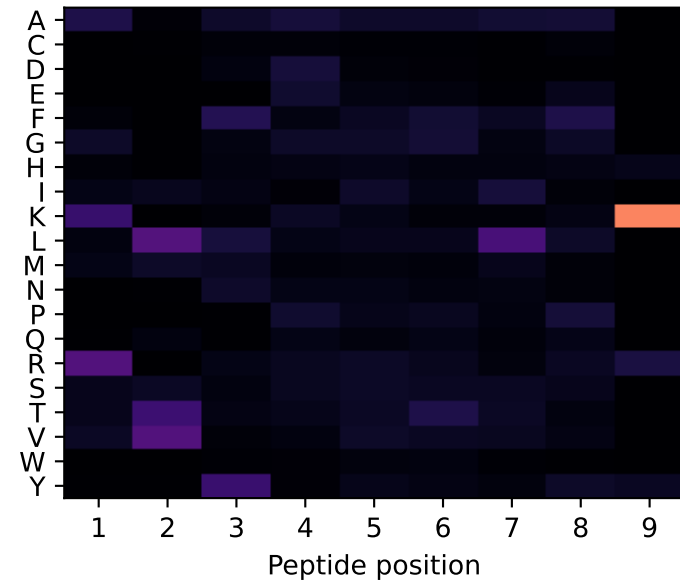

HLA-B*27:05
Shared ensemble

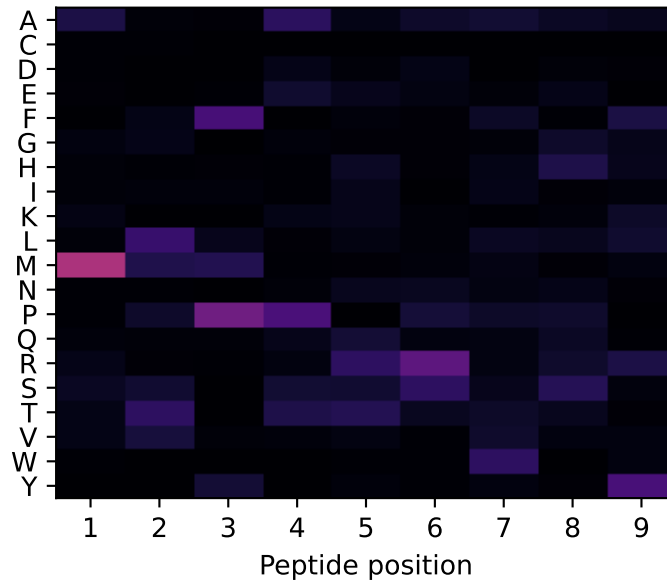

HLA-B*27:05
Matching allele template

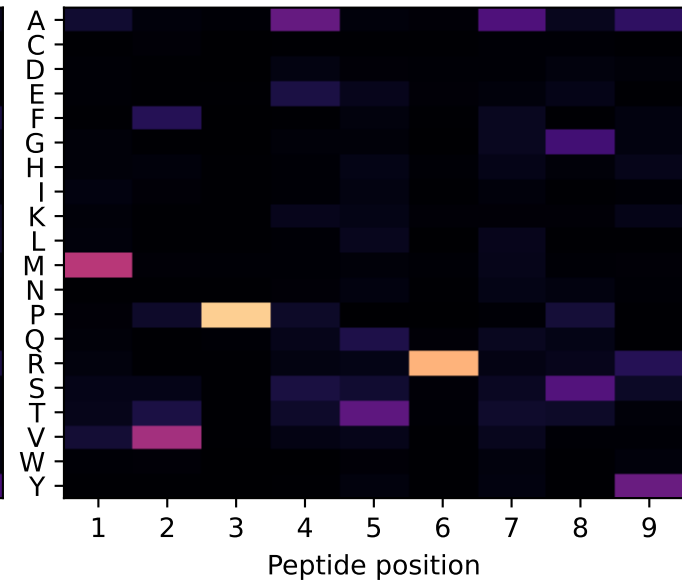

HLA-A*03:01
Empirical: half-life >2 h

HLA-A*03:01
Shared ensemble

HLA-A*03:01
Matching allele template

Amino-acid probability
